

Keep the affiliate-first front door. Make the shop behind it sell like Wayfair.

A prioritised UI/UX playbook for the AF Home web team. Every item names the gap, what Wayfair does well, the fix, and how we'll know it's done. Work top to bottom — the order is the priority.

Benchmark: Wayfair.com & its category system

Subject: afhome.ph storefront (home, category, product, search)

Reading order: P0 → P1 → P2

01 The headline

The good news first: our product page is already close to Wayfair-grade, and in one area — local payments and installments — it's ahead. The problems are almost all *before* the shopper reaches a product, plus a trust layer that's still showing its scaffolding.

P0 · Fix first

Affiliate-first is the model — but the shop has to be one obvious click away.

Keeping `afhome.ph` as the affiliate-membership front door ("Earn From Home. Build a Team.") is a deliberate choice, and we're keeping it. The problem is what happens next: a visitor who just wants to *buy* — or an affiliate who wants to browse the catalogue they're promoting — has to hunt for the store. The "Browse Shop" link is quiet and easy to miss. Wayfair's lesson isn't "be a pure store"; it's that the path to products should never be ambiguous. Add a loud, persistent **Shop** button and the affiliate-first identity costs us nothing.

Decision made: affiliate-membership first, shop one click away

Three things are costing us real money today, in order:

WHAT	IMPACT	WHERE IT'S COVERED
Shop entry is buried on the landing page	Buyers & affiliates can't reach products fast	\$03
Category pages render empty	236 furniture SKUs invisible to Google; users see a spinner	\$05
No reviews + visible placeholder data	Every product reads "0 sold, no rating"; dummy phone/events leak trust	\$06

02 Scorecard vs Wayfair

Filled squares = maturity (4 = excellent). Teal means AF Home already matches or beats Wayfair on that dimension — we have more of those than you'd expect. One caveat: Wayfair is a pure retailer, while we're affiliate-membership first with a store attached, so for us "how fast can you reach the shop" matters more than "is the homepage a store."

DIMENSION	AF HOME	WAYFAIR	READ
Path from landing to shop	■ ■ ■ ■	■ ■ ■ ■	Affiliate-first by design; shop link buried
Navigation & taxonomy depth	■ ■ ■ ■	■ ■ ■ ■	Sub-cats hidden in filters
Category page render & SEO	■ ■ ■ ■	■ ■ ■ ■	"0 of 236 · Loading..."
Filtering / faceted search	■ ■ ■ ■	■ ■ ■ ■	Price/brand only, no material/size/color
Product page completeness	■ ■ ■ ■	■ ■ ■ ■	Near parity — real strength
Ratings & reviews (social proof)	■ ■ ■ ■	■ ■ ■ ■	0 reviews across catalogue
Authentic data (no placeholders)	■ ■ ■ ■	■ ■ ■ ■	Dummy phone, events, testimonials
Search experience	■ ■ ■ ■	■ ■ ■ ■	Not surfaced on landing
Inspiration / editorial / shop-the-look	■ ■ ■ ■	■ ■ ■ ■	We have DreamBuild — unused edge
Local commerce fit (pay, installment)	■ ■ ■ ■	■ ■ ■ ■	GCash/Maya/BillEase — we win here
Delivery ETA by location	■ ■ ■ ■	■ ■ ■ ■	Generic "1–3 days" only

03 Front door & identity

The decision is made: afhome.ph stays affiliate-membership first. The job here is to make the shop impossible to miss and one tap away — for buyers, and for

affiliates browsing the catalogue they promote. High impact, low effort.

P0

Effort: Low

Add a prominent, persistent "Shop" button

THE GAP

The affiliate landing keeps its two calls to action ("Join as an Affiliate" and "See How It Works"), while the only route to products is a quiet "Browse Shop" link that blends in. A visitor here to buy — or an affiliate wanting to see the catalogue — has to work for it.

THE FIX

Give "Shop" the same visual weight as "Join as an Affiliate" in the hero — two co-equal primary buttons, side by side: earn, or shop. Then pin a **Shop** button in the global header on every page, so products are always one tap away.

DEFINITION OF DONE

- Hero shows two co-equal primary buttons: "Join as an Affiliate" and "Shop the Catalogue".
- A persistent "Shop" button sits in the global header on every page — landing and store.
- Logged-in affiliates see the same Shop button and can browse/buy at member price without leaving the flow.
- Track landing → shop click-through to confirm the button is found and used.

P1

Effort: Low

One consistent header across store and landing

THE GAP

The marketing landing page and the `/shop` store use different headers, logos rendered at different sizes, and different nav. It reads like two sites bolted together.

FIX

Single global header everywhere: logo → landing, a prominent **Shop** button, search, category mega-menu, account, cart, plus the affiliate entry. Consistent logo asset and lockup.

04 Navigation & taxonomy

We have the right *intent* — Shop by Category, by Room, by Brand — but the depth only appears once you're already inside a category's filter sidebar. Discovery should happen from the menu.

P1

Effort: Medium

Build a real shoppable mega-menu

THE GAP

"Shop Category" is a flat dropdown. To discover that Furniture contains Sofas, Sectionals, Dining Sets, Bed Frames, etc., a shopper must land on the category and open filters. Those leaf categories are our best-converting, most searchable pages and they're buried.

WHAT WAYFAIR DOES

Hovering a department opens a multi-column menu: sub-categories, sub-sub-categories, a "Sale" column, top brands, and 2-3 visual featured tiles. Any leaf is one hover + one click away.

DEFINITION OF DONE

- Each top department expands to show its leaf categories (Furniture → Sofas & Sectionals, Beds, Dining Sets, Cabinets & Storage, Mattresses...).
- Every menu includes a "Shop by Room" path and a visible "Deals/Sale" entry.
- Menu is keyboard-navigable and works as tap-accordions on mobile.

P2

Effort: Low

Promote DreamBuild & Interior Services to first-class nav

THE OPPORTUNITY

Wayfair sells "Design Services" as a headline nav item. We actually *run* an interior design + fit-out studio. That's a differentiator hiding as a secondary link.

FIX

Surface "Interior Services / Design with us" in primary nav, linked to a lead-capture flow, so a browsing shopper can convert into a higher-value project.

05 Category pages (PLP)

This is where our biggest *technical* problem lives — and it's silently bleeding organic traffic.

P0

Effort: Medium

Render products in the initial HTML (SSR/SSG)

THE GAP

The Furniture page's server response literally reads `Showing 0 of 236 products · Loading products...`. Products are fetched client-side after load. That means Google indexes an empty page for all 236 SKUs, and users stare at a spinner on first paint — worst on the mid-range Android phones most of our market uses.

WHAT WAYFAIR DOES

Category pages arrive with products, titles, prices and links already in the HTML. They're fully indexable and feel instant.

DEFINITION OF DONE

- First byte of a category URL contains the first page of products (name, price, image, link) as real HTML.
- Filters and pagination can stay client-side, but state lives in the URL (shareable, back-button-safe, crawlable).
- Validate with "View Source" and Google's Rich Results / URL Inspection — products must be visible without running JS.

P1

Effort: Medium

Faceted filters tuned for furniture & home

THE GAP

Today's filters are Category, Brand, Price, In-stock, Discounted. For furniture that's not enough — people shop by *colour, material, size, style, seat count*. We already store most of these (the Franco PDP lists material, colour options, dimensions, warranty); we just don't let people filter on them.

WHAT WAYFAIR DOES

Deep facets per category with live result counts, active-filter chips, and a sticky filter rail. You can go from 5,000 sofas to "grey, fabric, 3-seater, under ₱20k" in seconds.

DEFINITION OF DONE

- ≥6 useful facets on furniture PLPs (e.g. colour, material, size/dimensions, style, price, brand, rating).
- Each facet shows a live count; selecting one narrows the rest.
- Active filters appear as removable chips above the grid; "Clear all" resets.

P1

Effort: Low

Rebuild the product card

THE GAP

Cards currently lead with "Ask AF" and show "No rating · 0 sold" on every item. The price is there but understated, and the strongest local hook — BillEase instalments — never appears until the PDP.

FIX

Reorder the card so it sells: image → brand → clean title → price (with "from ₱X/mo") → rating or "New" → badges. Add a quick "Add to cart" and a save/heart. Demote "Ask AF" to a small secondary action. See [Design standards](#) for the exact anatomy.

06 Trust & social proof

Filipino shoppers buying furniture online are cautious about scams and quality. Every unfinished-looking element chips away at the confidence to check out.

P0

Effort: Low

Purge placeholder / dummy data from production

THE GAP

Live pages show a fake contact number (+63 912 345 6789), unresolved "email protected" strings, hardcoded events dated "FEB15 / FEB18 / FEB22", "0 sold" and "-- viewing now" counters, and testimonials using random stock/gstatic avatars. Individually small; together they whisper "not a real, finished store."

WHAT WAYFAIR DOES

Every number on screen is real and specific — review counts, delivery dates, stock. Nothing is a placeholder.

DEFINITION OF DONE

- Zero placeholder strings in production (grep the build for sample numbers, "lorem", "email protected", "FEB15").
- Every visible count is real, or the element is hidden until it has real data.
- Testimonials replaced with real, named customers/projects — we have DreamBuild installs and real buyers to feature.

P0

Effort: High

Stand up a real ratings & reviews system with volume

THE GAP

The whole catalogue reads "0.0 (0 reviews) · 0 sold". Gating reviews to verified buyers is the right call — but with zero volume it currently signals "nobody has bought this."

WHAT WAYFAIR DOES

Star average + review count on every card and PDP, a rating distribution bar, customer photos, and "verified" tags. Reviews are the single biggest driver of furniture-purchase confidence online.

DEFINITION OF DONE

- Post-delivery review request (email/SMS) automatically invites verified buyers to rate + upload a photo.
- Seed with real reviews from past customers before featuring products prominently.
- PDP shows average, distribution, count, and customer photos; cards show star + count once available (and simply omit it, cleanly, when not).

P1

Effort: Low

Turn "Authenticity Guaranteed" into a real, defined badge

THE GAP

The homepage trust bar (Nationwide Shipping, Authenticity Guaranteed, Trusted Brands, 24/7 Care) is generic and unlinked.

WHAT WAYFAIR DOES

"Wayfair Verified" is a named program with criteria and a badge on qualifying products — a trust signal shoppers can actually reason about.

DEFINITION OF DONE

- Each trust promise links to a real policy page (returns window, warranty, authenticity guarantee).
- Define an "AF Verified" standard and badge qualifying SKUs, so the claim means something specific.

07 Product pages (PDP)

Our strongest area — keep what works, then close a short list of gaps. Don't rebuild this; refine it.

Keep doing (already at Wayfair level)

- Colour/variant swatches with real thumbnails and per-variant dimensions.
- BillEase "3 months for ₪X/month" instalment breakdown — clearer than most global sites.
- SKU, live stock ("Only 9 left"), specifications table, care instructions, warranty, disclaimer.
- Related products and the "Ask AF" AI Q&A assistant.

P1

Effort: Medium

Require ≥ 4 images per SKU, including scale & dimension shots

THE GAP

The Franco sofa PDP says "Showing product image 1 of 1." One photo isn't enough to spend ₱14,400 with confidence.

WHAT WAYFAIR DOES

Multiple angles, an in-room lifestyle shot, close-up detail, a dimension diagram, sometimes video and customer photos.

DEFINITION OF DONE

- Publishing rule: no SKU goes live with fewer than 4 images.
- Mandatory set: front, detail/material close-up, one in-room "scale" shot, one dimension diagram.
- Gallery supports zoom and swipe on mobile.

P1

Effort: Medium

Location-based delivery ETA & fee

THE GAP

PDP says "Ships within 1–3 business days · Nationwide via XDE." In an archipelago, Metro Manila and, say, Palawan or Mindanao are very different promises. Vague ETAs create post-order complaints.

WHAT WAYFAIR DOES

Enter a location → get an estimated delivery date and shipping cost right on the PDP, before adding to cart.

DEFINITION OF DONE

- Shopper picks region/city (or we detect it) and sees an estimated delivery window + shipping fee on the PDP.
- Estimate persists into cart and checkout.

P2

Effort: Low

Clean the visible product title

THE GAP

Some titles are keyword-stuffed into the visible H1 (the "Comfora... Mid Century Sofa, Cloud Sofa, Oil Wax Leather Sofa, Solid Wood Sofa, Walnut Sofa..." example). It looks spammy and hurts scannability.

FIX

Show a clean human title ($\approx \leq 70$ chars). Push keywords into structured data, meta tags, and the description — where they help SEO without hurting the shopper.

08 Search

P1

Effort: Medium

Make search prominent, fast, and Filipino-aware

THE GAP

Search isn't surfaced on the landing page and its power is unclear. For a broad catalogue (furniture, appliances, gadgets, auto care, baby), search is often the fastest path to purchase.

WHAT WAYFAIR DOES

A permanent, central search bar with autocomplete, product/category/brand suggestions, and typo tolerance.

DEFINITION OF DONE

- Search bar reachable in one action on every page (store and homepage).
- Autocomplete under ~300ms with product thumbnails, categories, and brands.
- Typo tolerance + a Filipino synonym map — an edge Wayfair can't match for our market (e.g. "aparador" → wardrobe, "sala set" → living room set, "papag" → bed frame, "ref" → refrigerator).

09 Inspiration & services

P2

Effort: Medium

"Shop the Room", powered by real DreamBuild projects

THE OPPORTUNITY

Wayfair invests heavily in Inspiration, curated collections (Japandi, Quiet Luxury), Shop-the-Look, and buying guides — it's how they capture early-stage browsers. We can do a version they can't: use *our own real fit-out projects* as shoppable rooms.

FIX

Publish a small set of curated rooms and real project galleries where each item is tagged and buyable, plus a few buying guides ("How to choose a sofa for a condo"). This links the store to DreamBuild and earns long-tail SEO.

DEFINITION OF DONE

- 3-5 launch collections / "shop this room" galleries with tagged, add-to-cart products.
- Each links to the Interior Services lead form for higher-value conversion.

10 Wayfair elements worth borrowing

The specific patterns to lift — each mapped to how it applies to us.

Unmissable path to shop

Wayfair never leaves you wondering how to reach products.

→ Prominent + persistent Shop button (\$03).

Deep shoppable mega-menu

Every leaf category one hover away, with room + brand + sale paths.

→ Rebuild nav (\$04).

Ratings on every card & PDP

Star + count as default social proof.

→ Reviews system with volume (\$06).

Faceted filtering per category

Colour, material, size, style with live counts.

→ Furniture facets (§05).

Named trust program

"Verified" badge with real criteria beats a generic promise.

→ Define "AF Verified" (§06).

Delivery date by location

Concrete ETA + fee before add-to-cart.

→ PDP ETA (§07).

Financing surfaced everywhere

"From ₧X/mo" on cards, not just PDP.

→ We already have BillEase — surface it earlier (§05).

Design Services as headline nav

A first-class path to high-value projects.

→ Promote DreamBuild (§04, §09).

11 Quick wins vs bigger bets

Sequence the work. Quick wins are high-impact and shippable in 1–2 sprints; bigger bets need real build time but are where the durable advantage is.

QUICK WINS — DO THESE NOW

FIX	PRIORITY	WHY IT PAYS OFF FAST
Add prominent + persistent Shop button	P0	Buyers & affiliates reach products in one tap
Purge placeholder/dummy data	P0	Removes trust leaks; cheap grep-and-fix

FIX	PRIORITY	WHY IT PAYS OFF FAST
Rebuild product card + demote "Ask AF"	P1	Clearer price/CTA lifts click-through
Surface "from ₱X/mo" on cards/PLP	P1	Our biggest local hook, shown earlier
Clean keyword-stuffed titles	P2	Scannability + looks less spammy
Add Filipino search synonyms	P1	Recovers "no results" dead-ends

BIGGER BETS — PLAN & RESOURCE

INITIATIVE	PRIORITY	PAYOFF
Server-render category pages	P0	Unlocks organic traffic for 236+ SKUs; faster first paint
Ratings & reviews with real volume	P0	Largest lever on furniture-purchase confidence
Faceted filtering	P1	Turns big catalogue into findable catalogue
Mega-menu rebuild	P1	Deep discovery from anywhere on site
Location-based delivery ETA	P1	Fewer post-order complaints; higher checkout confidence
Shop-the-Look via DreamBuild	P2	Differentiation + long-tail SEO + services leads

12 Design standards

So we stop re-deciding the basics on every screen. These are the house rules — apply them consistently.

Product card anatomy (top to bottom)

- **Image** — fixed aspect ratio (4:5), consistent neutral/white background, lazy-loaded.
- **Brand** — small, muted, above the title.
- **Title** — clean, clamped to 2 lines. No keyword stuffing.
- **Price** — prominent; show strike-through original + sale price when discounted; add "from ₱X/mo" instalment line.
- **Rating** — star + count when available; render nothing (cleanly) when not — never "0 sold / no rating".
- **Badges** — at most one or two: Sale %, AF Verified, Fast Delivery, Low Stock.
- **Actions** — primary "Add to cart" + save/heart. "Ask AF" becomes a small tertiary icon.

Badge system — consistent colour, shape, placement

- **Sale -%** red — price reductions only.
- **AF Verified** green — meets the defined authenticity/quality standard.
- **Fast Delivery** teal — ships/delivers quickly to the shopper's region.
- **Only N left** amber — genuine low stock only. Never fake urgency.

Imagery standard

- Consistent aspect ratio and background across a grid — mismatched crops make a page look cheap.
- ≥ 4 images per SKU: front, material/detail, in-room scale shot, dimension diagram.
- Keep the Cloudinary auto-format/quality pipeline — it's already doing good work.

Quality floor (non-negotiable on every screen)

- Tap targets $\geq 44\text{px}$; visible keyboard focus; alt text on product images.
- Text contrast meets WCAG AA; respect reduced-motion.
- Filter/sort/search state lives in the URL — shareable and back-button-safe.
- Empty and error states give direction ("No sofas match these filters — clear one to see more"), not just a blank grid.

AF Home — Storefront UI/UX Playbook. Benchmarked against Wayfair, Sept 2026.

Work the list in order. Ship P0 first.

● Annotated section teardown · reconstructed from live page content

Section by section: what to copy from Wayfair, what to fix on AF Home.

Faithful wireframe reconstructions of each site's real sections — same labels, same structure, same example products — marked up like a design review. Left column shows the pattern worth copying; right column shows our version and where it needs work.

✓ Copy this / keep — it's working → Improve — close the gap ! Fix — costing us now

01 Front door & hero

Wayfair opens straight into shopping. Our affiliate-first hero stays — but the way

into the shop is a whisper when it should be a button.

✓ Copy this wayfair.com

- 1 **Central, always-visible search.** The single fastest path to a purchase sits dead center.
- 2 **Domain = shop.** Products, deals and categories are on screen in the first second.
- 3 **Deal hero + rated product rail.** Urgency and social proof above the fold.

- 1 **Shop entry is a plain text link** in the corner. Buyers and affiliates browsing the catalogue have to hunt for it.
- 2 **No search on the landing page.** Add one, or at least route the Shop button somewhere search-first.
- 3 **Keep the affiliate-first identity** — that's the deliberate model. Just give “Shop” equal billing in the hero + a pinned header button.

Net: don't copy Wayfair's store-first homepage — copy its **zero-ambiguity path to products**. One prominent, persistent Shop button does it.

02 Navigation & mega-menu

Our leaf categories (Sofas, Dining Sets, Bed Frames...) are our best-converting pages, but they only appear *after* you land and open filters. Wayfair surfaces them

from the menu.

✓ Copy this wayfair.com

- 1 Leaf categories one hover away — multi-column, grouped by room/type.
- 2 A “Sale” column inside every department.
- 3 Featured tile + brand shortcuts make the menu itself shoppable.

→ Improve this afhome.ph/shop

- 1 Flat dropdown, top-level only. No leaf categories, no Sale column, no brands, no imagery. Build the multi-column mega-menu.
- 2 Keep “By Room” & “By Brand.” The intent is right — it just needs depth behind it.

03 Category page (listing)

Our biggest silent problem lives here: the page ships with no products in it, and

the filters are too thin for furniture.

✓ Copy this wayfair.com

- 1 **Deep facets** — color, material, size/seats, style, rating — with live counts.
- 2 **Products in the HTML** instantly, each with rating + badge. Fully indexable.

→ Improve this afhome.ph/category/furniture

- 1 **Page renders empty.** Products load client-side, so Google indexes “0 of 236” and users see a spinner. Server-render the first page. (*Highest-ROI technical fix.*)
- 2 **Filters too thin for furniture.** Add color, material, size/dimensions, style — attributes we already store on the product.

04 Product card

The card is where browsing turns into clicks. Ours currently leads with “Ask AF”

and announces “No rating · 0 sold” on every item.

✓ Copy this wayfair.com

- 1 **One trust badge** (Verified / Sale) top-left.
- 2 **Rating + count, sale price, delivery date** — everything needed to click, on the card.

- 1 **“Ask AF” dominates.** Demote it to a small icon; lead with price + add-to-cart.
- 2 **“No rating · 0 sold” on every card** reads as “nobody bought this.” Hide it cleanly until there's real data.
- 3 **Surface what we already have:** BillEase “from ₱X/mo” and (once seeded) star ratings + an AF Verified badge.

05 Product page (PDP)

Flip the framing here: this is our *strongest* page, and it beats Wayfair on local

payments. Keep the green, close three gaps.

✓ Mostly keep [afhome.ph/product/...](#)

- 1 **Only one image.** Require ≥ 4 per SKU: angle, detail, in-room scale, dimension diagram.
- 2 **BillEase “P5,471/mo”** — keep & surface earlier. This beats Wayfair for our market.
- 3 **Swatches, live stock, specs, warranty** — already Wayfair-grade. Keep.
- 4 **“0 reviews” + generic ETA.** Seed reviews; add a location-based delivery date.

✓ Borrow these 3 [wayfair.com](#)

- 1 **Multi-image gallery** incl. a dimension diagram (the “↔” thumbnail).
- 2 **Reviews with photos + rating breakdown.** Our #1 trust gap.
- 3 **Delivery date by location,** shown before add-to-cart.

Net: our PDP is a strength — don't rebuild it. Add images, reviews, and a location-based ETA, and it's fully at parity while staying ahead on GCash/Maya/BillEase.

AF Home — Annotated Section Teardown. Companion to the UI/UX Playbook · Sept 2026.

Green = copy/keep · Amber = improve · Red = fix
